

June 2011

Dear future Algebra II student:

We hope you have a fun and relaxing summer. As a requirement for the Algebra II course, you will need to have a Texas Instruments (TI-83 or TI-84 or TI-Nspire) graphing calculator. This is a calculator that is used in all successive math courses at the high school and most colleges.

If you need to purchase one, they are usually on sale during the month of August at office supplies stores and discount department stores. If you purchase this calculator, please save the points symbol located on the back of the card that comes with the calculator. These points allow the department to purchase technology items used for educational purposes in the classroom.

We look forward to working with you in the 2011-2012 school year!

Sincerely,

Algebra II teachers
